Callit: questions for your legal team

From ReapLift, 13 November 2026.

Before your employees start using Callit and we publish it on the Google Play Store, your legal team needs to answer the questions below and approve a few documents. This is a list of questions for your lawyers. It is not legal advice.

In this document, **"you" and "your company" mean the company whose employees use Callit**, not ReapLift.

Who is who

Who	What they do in Callit
Your company	The company whose employees use Callit. You decide why call data is collected, who in your company can see it, and how long it is kept. The data is yours.
ReapLift	Built Callit and runs it for you. We store the data on our servers and only use it to provide Callit to you. We don't use it for anything else.
Your employees	Install the Callit app on their work phone, which has a company SIM.
Your customers	The people your employees call, or who call your employees. Their phone numbers, names and call recordings are stored in Callit.
Hostinger and Cloudflare	Companies ReapLift pays to host Callit. Hostinger runs our server and database. Cloudflare stores the call recordings.

What Callit does

- The app runs on the employee's work phone. It sends **only calls made or received on the company SIM** to our server: the phone number, the contact name saved on the phone, whether the call was incoming, outgoing or missed, the time, and how long it rang and lasted. Calls on a personal SIM never leave the phone.
- Callit does not record calls. If the phone's own calling app records calls, Callit finds the recording of each company-SIM call and uploads it. Recordings are deleted after **12 months**.
- After each call, the employee can note how the call went, add a comment and set a follow-up date.
- Your managers see the calls, reports and recordings on a website. Your CRM can read the same information.
- Your admins can list phone numbers that Callit must never record or keep, for example a director or a family member, and can delete earlier calls with those numbers.
- Coming next: employees send ready-made WhatsApp messages to customers from their own WhatsApp.
- Where data is kept: our server and database are with Hostinger in India (Mumbai). Recordings are with Cloudflare; we are confirming which country.

1. Responsibility for the data

India's data protection law (the Digital Personal Data Protection Act, 2023) treats the company that decides how data is used differently from the company that handles it on its behalf. We believe your company is the one that decides, and ReapLift handles the data for you.

1. Do you agree with that split?
2. What should the **agreement between your company and ReapLift** say? For example: what we may use the data for, how we keep it safe, how fast we tell you about a leak, what happens to the data when the contract ends, and that we use Hostinger and Cloudflare.
3. Can recordings be stored outside India, or must everything stay in India?
4. If data leaks, who tells the government's data protection board and the people affected, and how quickly?

2. Your employees

5. Do you need each employee's **written agreement** to track their company-SIM calls, or is it enough that it's part of their job? Do you want both?
6. Please write or approve a short **company SIM policy** for employees: the company SIM is for work only, what Callit collects, who can see it, how long it's kept, and what happens when someone leaves.
7. Please approve the **message the app shows** before tracking starts, which the employee must accept. We'll send you the current wording.
8. If an employee **changes their mind** and no longer agrees, should we only stop tracking, or also delete their calls?
9. When an employee **leaves the company**, how long should we keep their calls and recordings?

3. Your customers

10. Customers' numbers, names and voices are personal information. What must they be told? Our plan is for the employee to say at the start of each call: "*This call is recorded for quality purposes.*" Is that enough? Is it needed on every call?
11. Should your website's privacy page mention that calls are recorded? What should it say?
12. If a customer asks to **see or delete** their calls or recordings, who handles it and how quickly?
13. Are any of your customers banks, insurers, hospitals or government offices? They may have extra rules about recording calls.

4. Recording calls

14. Can your employees' phones legally record calls in India if the customer is told, as in question 10?
15. Is **12 months** the right time to keep recordings? How long should we keep the other call details, which reports use?
16. Who in your company may listen to recordings? Callit already logs every time someone plays one.

5. WhatsApp messages (coming next)

17. Employees will send ready-made messages from their own WhatsApp to customers they have just spoken to. Must the customer agree to receive WhatsApp messages first? Are there messages we should avoid, such as offers and promotions?
18. Should employees use a WhatsApp Business account on the company SIM, instead of their personal WhatsApp?

6. Publishing on the Play Store

19. Google only lets an app read a phone's call history if it has a good reason and Google approves it. We'd explain that Callit is a work tool for tracking business calls, and show Google a short video of the app. Should the app be published under **your company's name** or **ReapLift's**? Google asks a company publishing apps for its official business registration details.
20. Google requires a **public privacy policy** and a form listing what data the app collects and who it's shared with. We can draft both. Who in your company approves them?
21. Would you prefer the app to be **private**, so only your employees can install it from the Play Store and the public can't find it? Google still checks it either way.

What we need back from you

Document	Who writes it	Who approves it
Agreement between your company and ReapLift, including how we handle your data	ReapLift drafts, your company's legal team reviews	Both companies
Company SIM policy, signed by each employee	Your company's legal team or HR	Your company's legal team
The message the app shows employees before tracking	ReapLift	Your company's legal team
The line employees say to customers, and your website's privacy page	Your company's legal team	Your company's legal team
Callit's privacy policy and the Play Store data form	ReapLift	Your company's legal team
How long to keep recordings, call details, and leavers' data	Your company's legal team	Your company's management

When these are approved, ReapLift will put the final wording into the app, keep a record of each employee's signed policy and agreement, and send the app to Google for the Play Store.
