Callit Service Agreement

DRAFT for review by both companies' lawyers. Not legal advice. Text in [square brackets] is to be filled in or decided.

This agreement is made on [date] between:

- **[Client company name]**, a company registered in India with CIN [number], whose registered office is at [address] (**"the Company"**); and
- **ReapLift Private Limited**, a company registered in India with CIN [number], whose registered office is at [address] (**"ReapLift"**).

1. What this agreement is about

1.1 ReapLift provides **Callit**, a service that keeps a record of the business calls of the Company's employees on company SIM cards (and the recordings their phones make), shows them to the Company's managers, and makes them available to the Company's CRM.

1.2 Callit is made up of an Android app installed on employees' work phones, a website for the Company's managers, and an interface the Company's CRM can connect to.

1.3 The Company decides why call data is collected, which employees use Callit, who in the Company can see the data, and how long it is kept. ReapLift handles the data only to provide Callit to the Company, and only as this agreement allows.

2. What ReapLift will do

2.1 Provide Callit for the employees the Company adds, as described in Schedule A.

2.2 Keep Callit available on working days, aiming for [99]% availability each month, apart from planned maintenance announced [24] hours in advance.

2.3 Fix faults the Company reports: urgent faults (no calls arriving, nobody can log in) within [1 working day]; other faults within [5 working days].

2.4 Tell the Company before making a change that affects what data Callit collects.

3. What the Company will do

3.1 Use Callit only for its employees' business calls on company SIM cards.

3.2 Before an employee starts using Callit: give them the Company SIM Policy, get their signed acknowledgement, and make sure they accept the message the app shows before tracking starts.

3.3 Tell its customers that calls may be recorded, as agreed with its own legal team.

3.4 Keep its Callit logins and API keys safe, and remove access for people who leave.

3.5 Pay the fees in Schedule C.

4. How ReapLift handles the Company's data

4.1 **Only on the Company's instructions.** ReapLift uses the data only to provide Callit to the Company. ReapLift will not sell it, use it for advertising, use it to train software, or share it with anyone not listed in Schedule B.

4.2 **Kept separate.** Each client company's data is kept separate. One company can never see another company's data.

4.3 **Kept safe.** ReapLift keeps the data safe as described in Schedule B, including: encrypted connections, passwords and API keys stored in a form that can't be read back, recording links that stop working after a few minutes, and a log of every time someone plays a recording.

4.4 **People at ReapLift.** Only ReapLift staff who need it to run Callit can reach the data, and they are bound to keep it confidential.

4.5 **Other companies ReapLift uses.** ReapLift uses the companies listed in Schedule B to host Callit. ReapLift will tell the Company [30] days before adding or changing one, and the Company may object.

4.6 **Where the data is kept.** As listed in Schedule B. ReapLift will not move the data to another country without telling the Company first [and getting its agreement].

4.7 **Data leaks.** If ReapLift finds that the Company's data has been lost, stolen or seen by someone who shouldn't have seen it, ReapLift will tell the Company within [24] hours of finding out, explain what happened and what data was affected, and help the Company meet its own duty to inform the authorities and the people affected.

4.8 **Requests from people.** If an employee or customer asks ReapLift to see, correct or delete their data, ReapLift will pass the request to the Company within [3 working days] and help the Company answer it.

4.9 **Checks.** Once a year, or after a data leak, the Company may ask for a written description of how ReapLift keeps the data safe, and may ask reasonable questions about it.

5. How long data is kept

5.1 Data is kept for the periods in the Retention Schedule agreed by the Company, and deleted automatically after that.

5.2 Calls with numbers on the Company's never-record list are not stored. When the Company adds such a number and chooses to delete earlier calls, ReapLift deletes them and their recordings.

6. Fees

6.1 The fees are in Schedule C. Invoices are payable within [15] days. Fees are exclusive of GST.

7. Confidentiality

7.1 Each company will keep the other's business information confidential and use it only for this agreement. This continues for [3] years after the agreement ends, and for personal data, for as long as it is held.

8. Ownership

8.1 The Company owns its data. ReapLift owns Callit itself (the app, website and software). The Company may use Callit while this agreement is in force.

9. Responsibility and limits

9.1 Each company is responsible for its own obligations under India's data protection law.

9.2 Neither company is liable to the other for indirect losses or lost profits.

9.3 Apart from data leaks caused by ReapLift breaking section 4, and amounts owed under section 6, each company's total liability under this agreement is limited to the fees paid in the [12] months before the claim.

10. Length and ending the agreement

10.1 This agreement starts on [date] and lasts [12 months], then renews for [12 months] at a time unless either company gives [30] days' written notice.

10.2 Either company may end it straight away by written notice if the other seriously breaks it and doesn't fix the breach within [30] days of being told.

10.3 **When the agreement ends:** for [30] days the Company can export its call data and download its recordings. ReapLift then deletes all of the Company's data, including backups within [60] days, and confirms this in writing.

11. General

11.1 This agreement is governed by the laws of India. The courts of [city] have jurisdiction.

11.2 Changes must be in writing and signed by both companies.

11.3 Notices go to the addresses above, or by email to [Company email] and [ReapLift email].

Schedule A: What Callit does

- The app runs on the employee's work phone. It sends to ReapLift's server **only calls made or received on the company SIM**: the other person's number, the contact name saved on the phone, whether the call was incoming, outgoing, missed or rejected, the date and time, and how long it rang and lasted.
- Calls on a personal SIM are never read beyond telling which SIM they used, and never leave the phone.
- Callit does not record calls. If the phone's own calling app records calls, Callit looks at the list of audio files saved around the time of each company-SIM call, opens only the one that matches, and uploads it. Other audio files are never opened.
- After a call, the employee can add an outcome (for example "Interested"), a comment and a follow-up date.
- The app also sends basic details about the phone (brand, model, Android version, app version, which SIM slot is the company SIM) so ReapLift can support it.
- Managers see calls, reports, dashboards and recordings on the Callit website. Each manager sees only their own teams.
- The Company's CRM can read the same data with an API key the Company's admin creates.
- Admins can list numbers that are never recorded or stored, and delete earlier calls with those numbers.
- Planned: employees send ready-made WhatsApp messages from their own WhatsApp.

Schedule B: Keeping data safe, and companies ReapLift uses

Companies ReapLift uses to host Callit:

Company	What it does for Callit	Where
Hostinger	Runs Callit's server and database	India (Mumbai)
Cloudflare	Stores call recordings	[to confirm]

How data is kept safe:

- All connections between phones, browsers, the CRM and Callit are encrypted (HTTPS).
- Passwords and API keys are stored only in a scrambled form that can't be turned back into the original.
- Each login has a role (admin or manager), and managers see only their own teams.
- Recordings are private. A recording can only be played through a link that stops working after 5 minutes (24 hours for the CRM), and every play is logged.
- Repeated wrong passwords lock the login.
- The database is backed up [daily] and backups are kept for [7 days].

Schedule C: Fees

[Per active employee per month: ₹____ . Recording storage: included up to ____ GB, then ₹____ per GB per month. Set-up: ₹____ .]

Company SIM and Call Tracking Policy

DRAFT for [Client company name]'s legal team or HR. ReapLift prepared this as a starting point. Not legal advice. Text in [square brackets] is to be filled in or decided.

Issued by [Client company name] ("the Company"), effective [date].

1. Why this policy exists

The Company gives some employees a company SIM card for work calls with customers. To improve customer service and follow up on enquiries, the Company keeps a record of those calls using an app called **Callit**, provided by ReapLift Private Limited.

2. Who this policy applies to

Every employee who is given a company SIM card.

3. Using the company SIM

3.1 The company SIM is for **work calls only**. Please use your own SIM for personal calls.

3.2 Don't give the company SIM to anyone else, and tell your manager straight away if it is lost or stolen.

3.3 When you leave the Company, return the company SIM to [person or team].

4. What Callit records

For calls made or received **on your company SIM only**, Callit sends to the Company:

- the other person's number and the name saved for them on your phone;
- whether the call was incoming, outgoing, missed or rejected;
- the date and time, how long it rang and how long you talked;
- the recording of the call, if your phone's calling app records calls;
- the outcome, comment and follow-up date you add after the call.

5. What Callit never records

- Calls on your **personal SIM**. They never leave your phone.
- Your messages, contacts list, photos, location, or other apps.

6. Who can see your call records

- Your manager, for the teams they manage.
- The Company's Callit administrators: [names or roles].
- ReapLift, which runs Callit for the Company, only to keep the service working.
- The Company's CRM.

You can see your own company-SIM calls in the Callit app.

7. How long records are kept

- Call recordings: [12 months], then deleted.
- Other call details: [period].
- After you leave the Company: [period], then deleted.

8. Calling customers

8.1 At the start of each call, tell the customer: "*[This call is recorded for quality purposes.]*"

8.2 If a customer doesn't want to be recorded, [tell your manager, who can stop recording that number].

9. Your choices and questions

9.1 You can ask to see the call records Callit holds about you, or ask for a mistake to be corrected, by contacting [person or email].

9.2 If you no longer agree to call tracking, tell [person]. [What happens: for example, the Company will discuss other work arrangements with you.]

9.3 Questions about this policy: [person or email].

10. Breaking this policy

Misusing the company SIM, or trying to stop Callit from working on a company phone, may lead to [disciplinary action under the Company's rules].

Employee acknowledgement

I have read and understood the Company SIM and Call Tracking Policy. I understand that calls on my company SIM, and their recordings, are kept and seen by the Company as described above, and that calls on my personal SIM are not.

Employee name: _____ Employee code: _____ Company SIM number: _____ Signature: _____ Date: _____

Message the Callit app shows before tracking starts

DRAFT for [Client company name]'s legal team. ReapLift prepared this. Not legal advice.

This is the screen each employee sees when setting up Callit. Tracking only starts after they tap **I agree**. The app keeps a record of the date, time and version of the text each employee agreed to. If the text changes, the app asks again before tracking continues.

The text below is based on what the beta app shows today (version 2), with the Company's name and the 12-month recording period added. Proposed as **version 3**.

Before you start: what Callit does

[Client company name] uses Callit to keep a record of work calls on your company SIM. Callit is run for the Company by ReapLift.

What is sent from this phone

- Calls on your **company SIM only**: the number, the contact name saved on your phone, the date and time, whether it was incoming, outgoing, missed or rejected, how long you talked and how long it rang.
- The **recordings** of those company-SIM calls, made by your phone's own calling app. Only the recording that matches a company-SIM call is opened and sent. Other audio files are never opened.
- The outcome, comment and follow-up date you add after a call.

What is never sent

- Calls on your **personal SIM**. They never leave your phone.
- Your messages, contacts list, photos, location or other apps.

Who sees it

Your managers, the Company's Callit administrators, and ReapLift to keep the service working. You can see everything that was sent in this app.

How long it is kept

Recordings are deleted after 12 months. [Other details are kept for ____.]

Your choices

You can ask [person or email] to stop tracking at any time; they will disconnect this phone. Uninstalling the app also stops it. Read the Company SIM Policy for more.

[I agree] [Not now]

Telling customers that calls are recorded

DRAFT for [Client company name]'s legal team. ReapLift prepared this as a starting point. Not legal advice.

1. What the employee says at the start of each call

> *"Hello, this is [name] from [Client company name]. This call is recorded for quality purposes."*

[Decide: on every call, or only the first call with each customer.]

The phones' calling apps don't play an automatic announcement, so the employee says it. When the planned "call from the Callit app" feature is built, the app will show this line on screen before each call as a reminder.

2. Paragraph for the Company's website privacy page

> ***Phone calls.*** *When you speak with our team by phone, we record the call and keep a note of it, including your phone number, the date and time, how long the call lasted, and any follow-up our team plans. We use this to serve you better, to follow up on your enquiry, and to train our team. Recordings are kept for [12 months] and then deleted. Our call records are stored for us by our service provider, ReapLift Private Limited, in [India]. To see or delete your call records, or to ask us not to record your calls, contact [email or phone].*

3. If a customer asks not to be recorded, or to delete their calls

1. The employee tells [person or team].
2. A Callit admin adds the customer's number to **Settings** → **Never record these numbers**. From then on, calls with that number are not stored or recorded.
3. If the customer asked for deletion, the admin ticks **"Also delete past calls and recordings with this number"** when adding it.
4. [Person] replies to the customer within [time].

Callit Privacy Policy

DRAFT for review by ReapLift's lawyer and the client's legal team. Not legal advice. Text in [square brackets] is to be filled in or decided. Google Play requires this page at a public web address, for example https://callit.reaplift.com/privacy.

Last updated: [date]

1. Who we are

Callit is a work app provided by **ReapLift Private Limited**, [registered address], India (**"ReapLift"**, **"we"**). Companies use Callit to keep a record of their employees' business calls on company SIM cards.

Callit is not for personal use. It is set up by an employer for its own employees.

Who is responsible for your data: the company you work for (or the company you spoke with, if you are a customer) decides how your call data is used. ReapLift stores and handles the data for that company, only as it instructs. For questions about your data, contact that company first. You can also contact us at [email].

2. What the app collects

From the employee's work phone, **for calls on the company SIM only**:

- the other person's phone number, and the name saved for them on the phone;
- whether the call was incoming, outgoing, missed or rejected;
- the date and time, how long it rang and how long it lasted;
- the call recording, if the phone's own calling app recorded it;
- the outcome, comment and follow-up date the employee adds;
- basic details about the phone: brand, model, Android version, app version, and which SIM slot is the company SIM.

From people who log in to the Callit website: name, email address, and a log of their logins and of each time they played a recording.

3. What the app does not collect

- Calls on a personal SIM. The app only checks which SIM a call used; personal-SIM calls never leave the phone.
- Text messages, the contacts list, photos, location, or other apps.
- Audio files other than the recording of a company-SIM call. To find that recording, the app looks at the names, times and lengths of audio files saved around the time of the call; it opens and uploads only the one that matches.
- Calls with numbers the employer has put on its never-record list.

4. Why we use it

Only to provide Callit to the employer: to show its managers call history, reports and recordings, to let its CRM read them, and to help the employee follow up with customers. We don't sell the data, use it for advertising, or use it to train software.

5. Who can see it

- The employer's managers and Callit administrators.
- The employer's CRM, if the employer connects it.
- ReapLift staff who need it to run and support Callit.
- The companies we use to host Callit: Hostinger (server and database, India) and Cloudflare (recordings, [location]). They store the data for us and can't use it for anything else.

6. How we keep it safe

All connections are encrypted. Passwords and access keys are stored in a scrambled form. Each employer's data is kept separate. Recordings can only be played through links that expire within minutes, and every play is logged.

7. How long we keep it

Recordings are deleted after [12 months]. Other call details are kept for [period], or as the employer decides. When an employer stops using Callit, its data is deleted within [60] days.

8. Your choices

Employees and customers can ask the employer to see, correct or delete their call records, or not to record their calls. We help the employer answer these requests. Employees can stop tracking by asking their employer to disconnect their phone, or by uninstalling the app.

9. Children

Callit is a work tool for employees. It is not meant for anyone under 18.

10. Changes

If we change this policy, we'll update the date above and tell employers. If a change affects what the app collects, the app asks employees to agree again.

11. Contact

ReapLift Private Limited, [address]. Email: [email]. [Grievance officer: name, email.]

Answers for Google Play's data form

Google asks every app to list what it collects. Proposed answers, to be confirmed by both lawyers:

Google's question	Proposed answer
Does the app collect or share user data?	Collects: yes. Shares with third parties: no (hosting companies process it for us, which Google doesn't count as sharing)
Is data encrypted in transit?	Yes
Can users ask for their data to be deleted?	Yes, through their employer or by emailing [email]
Phone number and name (of the people called)	Collected. Purpose: app functionality. Required
Call logs (company-SIM calls only)	Collected. Purpose: app functionality. Required
Audio (call recordings)	Collected. Purpose: app functionality. Optional (only if the phone records calls)
Device or other IDs (phone model, app version)	Collected. Purpose: app functionality, troubleshooting
Location, contacts, messages, photos	Not collected

How long Callit keeps data

DRAFT for [Client company name] to decide, with its legal team. The "Proposed" column is ReapLift's suggestion. Once agreed, these periods become part of the Callit Service Agreement and ReapLift sets Callit to delete data automatically.

Data	What it is	Today	Proposed	Decided
Call recordings	Audio of company-SIM calls	Deleted after 12 months	12 months	[ ]
Call details	Number, contact name, type, time, durations	Kept with no limit yet	24 months	[ ]
After-call notes	Outcome, comment, follow-up date	Kept with the call	Same as call details	[ ]
Data of employees who leave	Their calls and recordings	Kept	Calls: 12 months after leaving. Recordings: their normal 12 months	[ ]
Phone details	Brand, model, app version	Kept while the phone is paired	Deleted 30 days after a phone is unpaired	[ ]
Logs of who played a recording	Who played which call, when	Kept	24 months	[ ]
Panel logins	Names and emails of managers and admins	Until removed	Removed when the person leaves	[ ]
Numbers on the never-record list	Numbers whose calls aren't kept	Until removed	Until an admin removes them	[ ]
All data when the Company stops using Callit	Everything above	No rule yet	Exportable for 30 days, then deleted; backups within 60 days	[ ]

Notes:

- Calls with numbers on the never-record list are not stored at all.
- If a customer or employee asks for their data to be deleted, an admin can do it straight away using the never-record list's "delete past calls" option.
- Some laws or contracts may require keeping records for longer, for example for tax or disputes. Please tell us if that applies.
